righteous indignation is intended: "He that is without sin among you, let him first cast a stone at her" (*The Holy Bible*, John 8:7). The focus of our discussion will be the principles of statistical analysis of data. The details of particular computational methods can be found in numerous standard statistical textbooks. We gratefully acknowledge the many who have emphasized proper use of data treatment principles, especially those listed in the references [4-9].

Sin 1: Using Parametric Analysis for Ordinal Data

yours is because using parametric test with ordinal type data
