SINGLE-CASE RESEARCH (SCR)

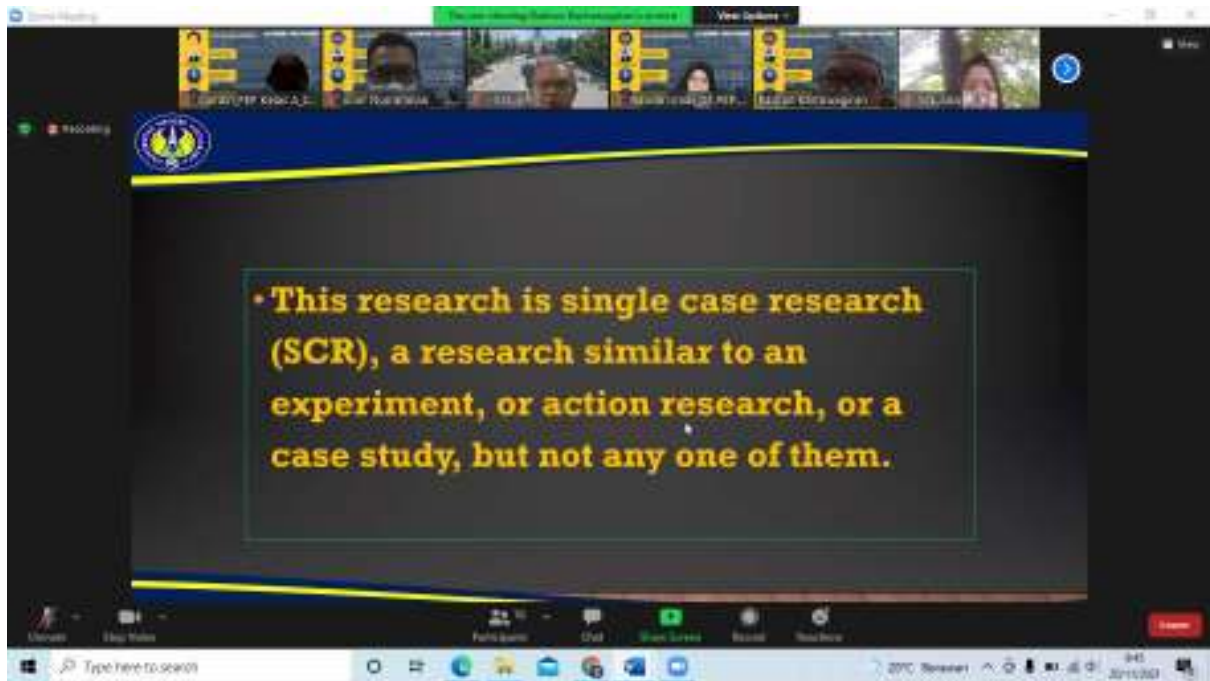

- SCR is a type of research that closely follows the logic laid out for experimental and quasi experimental research, with the exception that you using an N of 1 (i.e., you have only one person – or small number of person – in your study)

Unmute Your Voice

Zoom Meeting

Recording

The study was conducted in a Junior High School in Yogyakarta City during September and October 2017, involving one natural science teacher. Data were obtained by three observers who performed continual observations on three instructional sessions, namely the preliminary condition, the second condition, and third condition. The instructional subject matters were Earth Structure, Solar System, and Solar and Lunar Rotation and Revolution. In addition to the observations, the teacher's ability in conducting authentic assessment was also assessed by 31 students. The development of the teacher's ability in conducting the authentic assessment from preliminary condition to the second condition and the third condition was observed by three observers and assessed by 31 students.

Zoom Meeting

Results of Research

At the beginning of the study, the teacher conducted a preparation stage that was followed by a teaching stage. This was observed by three observers and assessed by 31 students. Results of this activity were called Condition 1, or the preliminary situation, and the results of the students' assessment became the pre-condition of the study. Results of the on-going observation of the teacher's abilities in doing authentic assessment can be seen in Figure 1.

Zoom Meeting

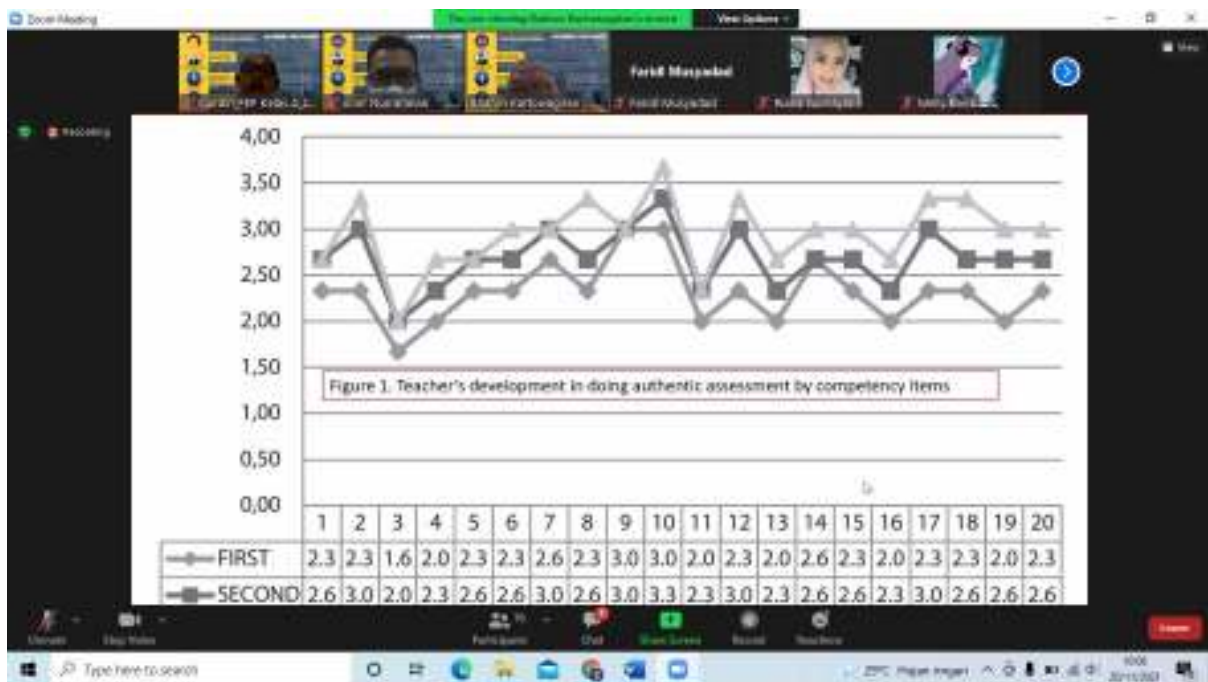

Figure 1 shows that each item of the teacher's abilities in doing authentic assessment improves from Condition 1, Condition 2, to Condition 3. None of the ability item stays in the same state. Using the foregoing criteria, 16 ability items still have a low score and four have a high score. Based on the results of Observation 1(Preliminary condition), the teacher was intervened by Intervention 1, specifically on ability items with low scores. Following Intervention 1, the teacher carried out Teaching 2, the observers Observation 2, and the students Assessment 2. Results of Observation 2 show that the teacher's ability items with a high score elevated drastically from 4 to 16, leaving four items of abilities with low scores, these are: Item 3 (Teacher's technique in answering students' questions), Item 4 (Teacher doing skill assessment during instructional interaction), Item 11 (Cognitive level teacher delivers to students), and Item 16 (Teacher

### Discussion

Observation results from the three observers in the study indicate that out of 20 items in the natural science teacher's abilities in doing authentic assessment, 16 items have a low score. Of the 16 items, six have a "very low" category: Items 3, 4, 11, 13, 16, and 19. Item 3 is related to techniques used by the teacher to respond to students' questions. It is observed that the teacher seldom answers students' questions well; his answers are inappropriate such as: "How on earth did you ask this question?", "That belongs to Year 1 material. Why did you ask this question?"

Zoom Meeting

Ability Item 11 deals with the level of the teacher's cognitive questions. In the early situation, the teacher's test items are of the multiple-choice type and represent mostly the knowledge level (C1), and the comprehension level (C2). Meanwhile, for the junior high school, teachers need to set up their assessment of application (C3), analysis (C4), evaluation (C5), and even creation (C6). Questions of the higher-order thinking will help students be able to think critically. The study by Abrami, *et al.* (2008) demonstrates that giving students the opportunity to have a dialogue helps students to face problems, gives students examples of critical thinking, and offers students some sort of guidance that will have a positive impact on their skills in critical thinking.

**TEACHER: BRIDGING STUDENT AND THEIR FUTURE**

*Teacher - Student*

Teacher is one of the important nodes that bridges students with their future

*Future*

- Students' mathematics learning outcomes are low (PISA, TIMSS, UN)
- The future demands for quality human resources require better educational services for students.
- The quality of teachers is still low (pedagogic & professional competence).
- Quality education services demand the availability of quality teachers.

Teacher is one of the dominant factors that affect students' achievement (Harris, J., 2000)

Teachers' professional development is a key component of students' learning achievement (Bobb, 2000)

The teacher's strategic role implies that the development of teacher professionalization is necessary (Saad, 2010)

**TEACHER TRAINING PROBLEMS AND CHALLENGES**

**Problems**

- ✓ Centralized teacher training - invited to attend centrally in one city/region
- ✓ Teacher leaves the school
- ✓ Students' learning is not served
- ✓ Individual training brings no impact
- ✓ Inefficient in terms of organization and financing

**Challenges**

- ✓ Teachers' self-improvement without sacrificing teaching
- ✓ Collaborative - collegial teacher training
- ✓ Teacher training which has an impact on self, peers, and students
- ✓ Training which is effective, efficient and evenly distributed

Special Education	7	3	7	46,45	66,79	71,70	25,26

\*participants in thousands

- ◆ The results are encouraging, there has been a significant increase in teachers' competence mastery
- ◆ These results are in line with qualitative findings from interviews with various stakeholders, which state that teacher competency improvement programs are able to improve teacher quality in terms of increasing their pedagogic and professional competencies
- ◆ Teachers have a better understanding of learning materials and how to teach them to students, and are more

**Community-Based Teacher Training**

**Synergy**

- Breakthrough in teacher empowerment optimizes synergy of teachers in one area
- Developing collaboration to grow together

**Peer Partners**

- Trainings are held near the workplace with their own partner teachers.
- Bringing teachers from various schools together to learn together.

**Mobilizing**

- Area-based training encourages the "life" of teacher working groups.
- The teachers' working group which had been in 'suspended animation' receives space and encouragement to come back to life, facilitating the improvement of teacher competence

Zoom Meeting

30°C Pagar Muger 10:00 20/11/2023

Zoom Meeting

There are many studies which indicate various benefits that can be obtained from teacher empowerment at school (Bakac, 2015)

## Community-Based Teacher Training

Network activities can positively contribute to teachers' sustainable professional development (Neil & Morgan, 2005)

Network is one of the strongest methods to ensure that an individual develops professionally and maintain strong relations with the professional community (Brine, 2005)

Teachers work group as a teacher forum has an essential role in teachers' sustainable professional development, to develop various beneficial activities towards teachers' competency improvement and professional development (Mulyasa, 2013)

An effective teacher must make the time to communicate with colleagues so that they will function better as mentors and models for others (Bernstein, Butler, & Fortino, 2005)

Community development through teachers' network can be expanded not only among teachers within one area, but also with various components which have teachers' professional relations (Neil & Morgan, 2005)

Several main directions of teachers' network (Neil & Morgan, 2005)

## CONCLUSION

- ✓ Community-based training is a training with a regional approach which are effective, efficient, and encourages equal distribution of quality
- ✓ Teachers improve themselves without sacrificing teaching, so that students continue to be "served" of their learning when teachers participate in self-improvement programs.
- ✓ The teacher training is collaborative - collegial, teachers can share and synergize.
- ✓ The teacher training has an impact on self, peers, and students, it builds synergy between elements for student learning success

**Coastal Region of Southeast Sulawesi**

Character is the culmination of habits, resulting from the ethical choices, behaviors, and attitudes an individual makes, and is the "moral excellence" an individual exhibits when no one is watching (Stedje, 2010: 3)

The problem in this research is that there has been no investigation of the character and values of junior high school students living in coastal areas. The implementation of character education in the school, home, and community environment has shaped the strength of students' character.

## B. METHODOLOGY OF RESEARCH

### 01 General Background of Research

This type of research is qualitative with ethnographic methods, so that this research produces data in the form of words written or spoken by people and behaviors that can be observed.

### 02 Informant of Research

Sources of informants are 30 people consisting of 5 (five) principals, 5 (eight) classroom teachers, 3 (eight) fishermen, 2 (two) religious/cultural leaders, 2 (two) fishermen, 10 (ten) students from High School, and 3 (three) academics.

The techniques used in the selection of informants are purposive and snowball sampling.

## 05 Data Collection Techniques

**Dissemination**

Triangulate research (interviews, observations, and focus group)  
**Triangulate time** (Observations to students in the coastal areas of SDG TBA were carried out more than once at different times.)  
**Triangulation source** (Interviews with students, teachers and parents)

**Extend participation time**

For example, evening apple activities held by school, after-class activities, learning and learning activities, fishing in the sea, bathing in the sea, going to markets, and helping parents repair boats, repair fish traps, and so on.

**Remove the certainty of observation**

In this context, researchers conducted observations in the exploration of disaster values in the school environment, in the community, and in the family environment.

**Fixing and preparing sufficient references**

Researchers read and prepare culture references such as research reports, national or international journals, national or international proceedings, and books related to the problem under study with the aim of increasing the validity of the information.

## D. CONCLUSIONS

### 01

Junior high school students who live in coastal areas have an identity that characterizes them as a maritime community. Geographical conditions that are always full of challenges and risks make students have special character values. In addition, character education that has been carried out for a long time in schools, homes, and community environments has made students in coastal areas religious, friendly, hard-working, caring towards their parents, independent, and disciplined.

### 02

Character education should be adjusted to the daily lives of students (local wisdom) in facing the challenges of life problems. Local wisdom in the coastal area refers to behavior that becomes a way of life. Planting character values is the responsibility of all residents on the coast. The values that have been attached to students will help teachers in implementing classroom assessment for successful learning. Students who have good quality values and character will contribute to the success of students in the academic field. In addition, this can be a strength in dealing with the challenges of life in the 21st Century.
